

Exam Code: 251-312

Exam Name: Admin of Symantec Backup Exec 12 for
Windows Servers

Vendor: Symantec

Version: DEMO

Part: A

1: Refer to the exhibit.

Given the following:

One week's backups (Full and Differentials) fit on a single tape.

The media is overwritten 4 weeks later.

Differential backups take 10 minutes.

Full backups take 30 minutes.

To what should the Append Period be set in order to prevent next week's backup from accidentally using the tape?

Week #	Mon	Tue	Wed	Thu	Fri	Sat	Sun
1	Full-Overwrite	Differential-Append	Differential-Append	Differential-Append	Differential-Append		
2							
3							
4							
5	Full-Overwrite	Differential-Append	Differential-Append	Differential-Append	Differential-Append		
6							

A.5 days

B.7 days

C.23 days

D.27 days

Correct Answers: A

2: Symantec Backup Exec 12 for Windows Servers (Backup Exec) is installed on a Windows 2000 Server. How can a backup administrator verify that the Symantec device drivers are installed for a tape device?

A.in Windows Device Manager, select the Tape Drives and verify the driver provider

B.in Windows Explorer, navigate to the Program Files\Execfolder

C.in the Devices view in Backup Exec, right-click the tape device and select Properties

D.in the Windows Registry, navigate to HKEY_Local_Machine\Exec

Correct Answers: A

3: Symantec Backup Exec 12 for Windows Servers (Backup Exec) is installed successfully, but the physically attached stand-alone tape drive fails to display within the Backup Exec Administration Console. The tape drive is displayed in Microsoft Windows 2003 Device Manager under the Tape Devices branch. Which two actions will resolve this problem? (Choose two.)

- A.restart the Backup Exec Server service and then use Windows Device Manager to scan for new devices
- B.right-click the Devices tree in Backup Exec and select Scan for New Devices
- C.verify that the tape drive is on the Backup Exec Hardware Compatibility List
- D.contact the tape drive manufacturer to confirm whether updates are necessary for the tape drive firmware
- E.through Windows Device Manager, check to see if the SCSIChanger device service is running and restart the service if it has failed to start

Correct Answers: C D

4: A new data retrieval company has a server farm with 30 TB of storage at 10% capacity. The Information Technology team is tasked to develop a backup strategy. The primary goal is to support backing up the full capacity of the server farm with the least amount of media. To meet these needs, the IT team invests in a high-capacity tape library, a stand-alone drive, and a DVD-RW drive with UDF packet writing support. The IT team also establishes a Backup-to-Disk folder. To accomplish the primary goal, which backup device is best to use when creating a backup job?

- A.high-capacity tape library
- B.4mm stand-alone drive
- C.DVD-RW drive with UDF packet writing support
- D.cascaded drive pool

Correct Answers: A

5: What are three functions of the Device Configuration Wizard? (Choose three.)

- Acreates a Backup-to-Disk folder
- B.configures robotic library drives
- C.installs tape device drivers
- D.edits properties of a Backup-to-Disk folder
- E.configures hot-swappable device drivers

Correct Answers: A B C

6: What are two ways Symantec Backup Exec 12 for Windows Servers (Backup Exec) encryption keys can be moved from Media ServerA to Media ServerB? (Choose two.)

- A.export encryption keys from Media ServerA and import on Media ServerB
- B.restore the Media ServerA Backup Exec database on Media ServerB
- C.create new keys on Media ServerB using the original passphrase
- D.copy the encryption key file from Media ServerA to Media ServerB
- E.use Central Administration Server Option to synchronize encryption keys

Correct Answers: B C

7: Which two processes can be used to move media from the offline location back to online? (Choose two.)

- A.delete the media and inventory the robot
- B.inventory the offline media

- C.catalog the offline media
- D.scan the robot
- E.create an import job

Correct Answers: B D

8: A backup administrator is given the responsibility to protect a remote site that contains a server with 30 TB of storage at 10% capacity. Management mandates that the backup administrator develop a backup strategy with the primary goal of quick recovery. To accomplish this, the backup administrator purchases a high-capacity tape library, a stand-alone drive, and a DVD-RW drive. The backup administrator also configures a Backup-to-Disk folder as a backup target device. To achieve quick recovery, which backup device should be used when creating a backup job?

- A.high-capacity tape library
- B.stand-alone drive
- C.DVD-RW drive with UDF packet writing support
- D.Backup-to-Disk folder

Correct Answers: D

9: What are two ways to create a duplication job? (Choose two.)

- A.right-click an existing policy and select Duplication Job
- B.select Job Setup --> Backup Tasks --> New job to duplicate backup sets
- C.run Tools --> Wizards --> Duplication Wizard
- D.right-click on a pending job in Job Monitor and select Duplicate
- E.right-click on an existing job and select Create Duplicate

Correct Answers: A B

10: When a piece of media is moved from its current media set to a different media set, what happens to the Overwrite Protection Period (OPP) and Append Period (AP) for that media?

- A.The OPP and AP are reset to the new media set properties when the media is next overwritten.
- B.The media is set to Scratch Media and the OPP and AP change to match the new media set.
- C.The media is added to the new media set and the OPP and AP immediately change to match the new media set.
- D.The media is added to the new media set and has the OPP and AP set to match the new media set after it is inventoried.

Correct Answers: C
