Exam Code: 000-093

Exam Name: Test093,IBM WebSphere Process

Server,V6.0, System Admin

Vendor: IBM

Version: DEMO

Part: A

1: A manager interacts with an expense application via a human task. What action is appropriate to take if an obscure exception occurs when the manager enters a response and completes the task?

A.Edit the business data from Failed Event Manager and re-submit the failed event.

B.Resubmit the failed event with trace using Failed Event Manager for further troubleshooting.

C.Delete the failed event from Failed Event Manager, then stop and re-start the TaskContainer.

D.Query the failed event using Failed Event Manager, then send the information to the developer.

Correct Answers: B

2: The SystemOut.log indicates that the installation of an enterprise application failed. If the application contains WebSphere Adapter artifacts, what must be done before attempting to reinstall?

A.Remove any SIBus destinations or JCA activation specifications created prior to the failure.

B.Remove the Event Archive table created prior to the failure.

C.Create new Endpoint Listener to replace the one existed prior to the failure.

D.Create necessary SIBus destinations and JCA activation specifications manually.

Correct Answers: A

3: Creation of a new profile failed with following error: Wait until the current creation or deletion operation is complete before continuing. In order to proceed with new profile creation, what must the administrator do next?

A.Stop the server, then restart the Profile Wizard.

B.Terminate any running javaw.exe process.

C.Make sure to enter a unique profile name from the wizard.

D.Delete profileRegistry.xml_LOCK file to release the lock.

Correct Answers: D

4: An event failure occurred due to wrong date format which was sent from component A to component B. What will the Failed Event Manager allow an administrator to do?

A.Edit the date value and resubmit

B.Create a human task to notify the event originator

C.Bypass component B

D.Re-route the message

Correct Answers: A

5: When using WebSphere Process Server V6.0.1, the installation of a business process that was generated for WebSphere Process Server V6.0.0 throws UnexpectedFailureException exception. Which of the following must the administrator do next?

A.Regenerate business process code in V6.0.1 and reinstall.

B.Run serviceDeploy tool to resolve this problem.

C.Make sure that Business Process Container has been installed.

D.Rename the module containing the business process different from the previous version.

Correct Answers: A

6: The TaskContainer application failed to start due to missing SchedulerCalendars application. Which of the following tasks must the administrator complete to correct the situation?

A.Reinstall Human Task Container which will reinstall the SchedulerCalendars application.

B.Manually install the SchedulerCalendars application, which is available in <install_root>\installableApps directory.

C.Reconfigure the human task container to use Application Scheduler instead.

D.Running bpeconfig.jacl will make SchedulerCalendars application accessible from TaskContainer application.

Correct Answers: B

7: The installation of a business integration application fails. The server log displays a message of the form: ... BPED0202I: Validated process model 'OrderProcess' unsuccessfully: 0 information, 2 warnings, 1 error. What should the administrator do to complete the application installation?

A.Turn detailed tracing on and install again to capture details on the installation failure.

B.Update the validFrom value for the OrderProcess component and reinstall.

C.Return the application to developer to fix errors in OrderProcess.

D.Return the application to developer to rebuild staging projects.

Correct Answers: C

8: During the execution of a business process instance, which of the following events CANNOT be seen in the trace log if the business process container trace level is set to all=enabled?

A.A new process instance getting created

B.An activity instance getting created

C.An event message delivery

D.A staff query result

Correct Answers: D

9: The log.txt contains INSTCONFPARTIALSUCCESS. In order to resolve the incomplete product installation, an administrator must do which two of the following?

A.Run installver_wbi command to install missing files through the tool.

B.Run the Installation Verification Test to detect if the error can be ignored.

C.Verify the installed files against the bill of materials using installver_wbi command.

D.Rename vpd.properties file, then re-run the installer.

E.Check to see if other log files identify the errors.

Correct Answers: C E

10: A long-running business process appears to have stopped due to repeated reply message delivery failures. Which of the following is the appropriate action for an administrator to take?

A.Re-send the response message through SIBus mediation layer.

B.Re-submit the message using the Failed Event Manager with trace on.

C.Restart the process instance through BPC Explorer.

D.Set the continueOnError attribute to true from Administrative Console.

Correct Answers: B

11: With tracing enabled for the staff support service, the following message indicates a problem exists reading which file?

javax.xml.transform.TransformerException: org.xml.sax.SAXParseException: Element type "xsl:template" must be followed by either attribute specifications, ">" or "/>"

A.actionSet.xsl

B.collectionTab.xsl

C.EverybodyTransformation.xsl

D.LDAPTransformation.xsl

Correct Answers: D

12: In which of the following topologies can the JDBC WebSphere Adapter be deployed to WebSphere Process Server?

A.As a standalone RAR

B.As part of an integration application

C.As part of an adapter application

D.As either a standalone RAR or part of an integration application

Correct Answers: B

13: An administrator plans to distribute an Service Component Architecture (SCA) module that contains a business process. Which of the following conditions must be met for successful distribution into a clustered environment?

A.In the cluster, one server must be running and the business process container must be configured on each server.

B.In the cluster, each server must be running and the business process container must be configured on one server.

C.In the cluster, each server must be running.

D.In the cluster, the business process container must be installed and configured on one server.

Correct Answers: A

14: An application has been installed with the following JMS binding: Connection JNDI Lookup Name is "jms/myLookupName". Which of the following resources needs to be established to support this binding?

A.JMS activation specification

B.JMS topic

C.JMS topic connection factory

D.JMS queue connection factory

Correct Answers: A

15: It has been determined that business process instance data must be deleted via Business Process Container Explorer. What level of authorization will allow the deletion of process instances that are either finished or terminated?

A.Originator

B.Administrator

C.Owner

D.Editor

Correct Answers: B

16: It has been determined that a process instance must be terminated. Compensation has been defined for the process model. What will be the effect if the administrator selects Terminate from the Business Process Choreographer Explorer?

A.The process instance is stopped and compensation processing is started.

B.The process instance is stopped and compensation processing is not started.

C.The process instance is stopped immediately while waiting for any outstanding activities or tasks to complete.

D.Nothing. Process instances with compensation cannot be terminated.

Correct Answers: A

17: Which option should be specified when installing an application containing Web services using the wsadmin command?

A.-deployws

B.-wsdeploy

C.-configws

D.-usedefaultbindings

Correct Answers: A

18: An application has been configured and installed with two JNDI lookup names, one for replies and the other for lookups. What resources must be configured by the administrator to support this configuration?

A.Two JMS activation specifications

B.Two JMS queues

C.Two JMS queue connection factories

D.Two JMS connection factories

Correct Answers: B

19: An administrator unsuccessfully attempted to deploy an enterprise application that contained a business process model. Which of the following is the most likely cause of the failed deployment?

A.The process template is in a stopped status.

B.The Business Process Choreographer database is not accessible.

C.A version of process template already exists.

D.An enterprise application already has a valid process template.

Correct Answers: B
