

Exam Code: HP0-K03

Exam Name: Integrating and Managing HP Blade System
in the Enterprise

Vendor: HP

Version: DEMO

Part: A

1: Which feature of PMP enables you to compare a newly established performance baseline with a previously created one?

- A.static analysis
- B.offline analysis
- C.online analysis
- D.comparative analysis

Correct Answers: B

2: Which tool analyzes the server configuration and recommends an action to resolve known performance problems on HP BladeSystem c-Class server blades?

- A.iLO 2
- B.Onboard Administrator
- C.Performance Management Pack
- D.BladeSystem Integrated Manager

Correct Answers: C

3: For optimal performance of an Infiniband switch in an HP BladeSystem c-Class, where should the mezzanine card in the blade server be installed?

- A.PCI-X slot 1
- B.any PCIe x4 slot
- C.Mezzanine position 1
- D.Mezzanine position 2

Correct Answers: D

4: Which component of the optional Brocade 4Gb SAN Switch Power Pack can help administrators monitor specific fabric metrics from an SID (Source ID) to a DID (Destination ID), so they can fine-tune and scale the fabric more efficiently?

- A.ISL Trunking
- B.Fabric Watch
- C.Extended Fabric
- D.Advanced Performance Monitoring

Correct Answers: D

5: Which Windows Performance Monitor counter is the most important counter for detecting memory bottlenecks in a Windows environment?

- A.disk:writes/second
- B.disk:pages/second
- C.paging file/%usage
- D.disk:pagefaults/second

Correct Answers: B

6: Your customer is running a Linux-based application on a c-Class server blade and has a

performance issue with the application response time. What are the first actions in helping your customer resolve the performance problem? (Select two.)

- A. develop an action plan
- B. complete an environmental assessment
- C. use the Onboard Administrator to update all firmware
- D. determine the tools to use and gather performance data
- E. determine one or more possible reasons for a bottleneck

Correct Answers: B D

7: Where does Performance Management Pack (PMP) derive its statistical analysis from?

- A. CPU Management Port using Microsoft Management Protocol (MMP)
- B. Insight Management Agents using Simple Network Management Protocol (SNMP)
- C. Integrated Performance Management chip using the Desktop Management Protocol (DMI)
- D. Integrated Performance Management chip using Simple Network Management Protocol (SNMP)

Correct Answers: B

8: Which tool is designed to reduce the risk of security threats by automating acquisition and deployment of patches, and continuously enforcing their persistence in the Windows operating system environment?

- A. Integrated Lights Out (iLO)
- B. Virtual Machine Management (VMM)
- C. Performance Management Pack (PMP)
- D. Vulnerability and Patch Management (VPM)

Correct Answers: D

9: Which database is supported by HP Vulnerability and Patch Management (VPM)?

- A. Oracle
- B. MySQL
- C. Postgresql
- D. Microsoft SQL

Correct Answers: D

10: Where can you change the rebuild priority for a Smart Array controller on a BL460c?

- A. ACU
- B. ORCA
- C. RBSU
- D. Onboard Administrator

Correct Answers: A
