

Exam Code: HP0-J16

Exam Name: Introduction to HP SANs

Vendor: HP

Version: DEMO

Part: A

1: What are the processing requirements of Information Lifecycle Management? (Select two.)

- A.fast
- B.secure
- C.auditable
- D.transparent
- E.easy to use

Correct Answers: C D

2: In the context of storage infrastructure management, what is the definition of the term target?

- A.a goal set for errors on a device
- B.an entity that needs management
- C.a disk or tape connected to a SCSI bus
- D.a vendor-specific management tool that connects to a device

Correct Answers: B

3: To which category of target-based management tools does HP Systems Insight Manager belong?

- A.system management
- B.network management
- C.storage systems management
- D.operating system management

Correct Answers: A

4: Which features are provided by Information Lifecycle Management? (Select two.)

- A.measures to protect data from corruption through its life cycle
- B.technologies and processes to dispose of outdated storage equipment
- C.technologies and processes to organize data based on size and sensitivity
- D.processes that enforce data-retention policies and make decisions about appropriate data storage environments
- E.technologies and processes that determine how to store, manage, and communicate information according to its business value

Correct Answers: D E

5: Which target-based management software is expected to be provided with the storage component?

- A.OS management suites
- B.system management suites
- C.network management suites
- D.device-specific management tools

Correct Answers: D

6: Which industry standard organization approved the Storage Management Initiative

Specification (SMI-S)?

- A.ITU
- B.ANSI
- C.IETF
- D.IEEE

Correct Answers: B

7: Which tasks are associated with controlling a target in a storage infrastructure management environment?

- A.discover, track, diagnose, and predict
- B.diagnose, predict, repair, and migrate
- C.configure, provision, repair, and migrate
- D.report, bill, analyze, diagnose, and predict

Correct Answers: C

8: Because Information Lifecycle Management (ILM) interfaces with activities and people, there is a potential overlap between ILM and other areas. Which area is likely to overlap with ILM?

- A.IT Budget Planning
- B.IT Project Management
- C.Business Financial Planning
- D.Business Process Management

Correct Answers: D

9: What are benefits of model-based automation? (Select two.)

- A.more control
- B.cost effectiveness
- C.better organization
- D.support for complex operations
- E.reduced likelihood of human error

Correct Answers: B E

10: What is a common method for handling multiple reporting and monitoring functions?

- A.Use graphical reports to enhance interpretation.
- B.Combine all information into one report for simplicity.
- C.Separate low-level information reporting from higher-level analysis and decision making.
- D.Use intelligent interfaces to offload reporting and decision-making from management software.

Correct Answers: C
