

Vendor: Cisco

Exam Code: 700-703

Exam Name: Cisco Application Centric Infrastructure for
Field Engineers Exam

Version: DEMO

QUESTION 1

How are endpoint location and identity mapping learned in an ACI fabric?

- A. Leaf nodes report endpoint addresses to the ARC using COOP.
- B. Learning occurs through APIC mapping, VMM mapping, DHCP forwarding, ARP/GARP learning, and data plane learning.
- C. VMM reports virtual machine creation to spine and leaf nodes.
- D. Addresses of all hosts that are attached to the ACI fabric are programmed through the API.

Answer: B

Explanation:

<http://wenku.baidu.com/view/04e2b1afba0d4a7302763a63.html?re=viewSlide>

QUESTION 2

Which best practice for virtual machine management domains must be used in an ACI fabric?

- A. Combine the endpoint groups that are associated with the VMM domains.
- B. Combine the application network profiles that are used by both VMM domains.
- C. Separate the VMM administration space across different leaf nodes.
- D. Separate the VLAN name space when VMM domains share a top-of-rack switch.

Answer: C

QUESTION 3

Which container is used for objects that require the same policy treatment?

- A. Contract
- B. Tenant
- C. Endpoint group
- D. Layer 2 through layer 7 network polices of the application
- E. Application network policy

Answer: C

Explanation:

End-Point Group - (EPG) Container for objects requiring the same policy treatment, i.e. app tiers, or services

QUESTION 4

Which option describes the initial configuration steps that the infrastructure administrator must perform in the ACI fabric?

- A. ACI cluster discovery and initialization, create VLAN pool (static), create logical domain ,and map logical domain to posts.
- B. ACI cluster discovery, create VLAN pool (static), create bridge domain,and map logical domain to ports.
- C. Fabric discovery and initialization, create VLAN pool (static), create logical domain, and map logical domain to ports.
- D. Fabric discovery and initialization, create VLAN pool (static), create physical domain, andmap physical domain to ports.

Answer: D

QUESTION 5

To which four layers of the OSI model would the ACI concepts of contracts, graphs, and ANPs be associated? (Choose four.)

- A. Data link
- B. Transport
- C. Presentation
- D. Application
- E. Session
- F. Network
- G. Physical

Answer: BCDE

QUESTION 6

Which two events occur on the ACI fabric in the event of a downlink failure on one vPC peers when all local member ports are down? (Choose two)

- A. The vPC reconfigures using the secondary peer link that is associated with the endpoints and a new VTEP entry is created.
- B. A bounce entry is created for the endpoints that are reachable via the port channel that points to the VTEP of the peers.
- C. The ACI fabric rediscovers the vPC peers and re-establishes communication between the endpoint and the leaf switch.
- D. All MAC-to-leaf bindings for the specific vPC are removed from the COOP database and the spine proxy.
- E. The APIC removes the associated leaf switch from inventory and rediscovers the fabric.

Answer: BD

QUESTION 7

Which option describes the ACI fabric information that is contained in the proxy station table?

- A. Addresses of all hosts attached to the ACI fabric.
- B. Addresses of all hosts attached directly to the leaf.
- C. Global cache of station endpoints.
- D. Local cache of station endpoints.

Answer: A

Thank You for Trying Our Product

Lead2pass Certification Exam Features:

- ★ More than **99,900** Satisfied Customers Worldwide.
- ★ Average **99.9%** Success Rate.
- ★ **Free Update** to match latest and real exam scenarios.
- ★ **Instant Download** Access! No Setup required.
- ★ Questions & Answers are downloadable in **PDF** format and **VCE** test engine format.
- ★ Multi-Platform capabilities - **Windows, Laptop, Mac, Android, iPhone, iPod, iPad.**
- ★ **100%** Guaranteed Success or **100%** Money Back Guarantee.
- ★ **Fast**, helpful support **24x7**.
