Vendor: IBM

Exam Code: C1000-132

Exam Name: IBM Maximo Manage v8.0 Implementation

Version: DEMO

QUESTION 1
A user wishes to perform the same work tasks on several assets simultaneously. How can this be configured?

A. A Route should be created with each stop being one Asset and the Job Plan associated with the Route record.
B. A Master Job Plan should be created with Tasks for each Asset.
C. A Work Order Hierarchy should be created against the same Job Plan used for all stops.
D. The Assets should be specified on the Multiple Assets, Locations and CIs table on the Work Order.

Answer: D
Explanation:
In Maximo:
If you want to perform the same work task(s) (defined by one Work Order) on multiple Assets at the same time, you should use the Multiple Assets, Locations, and CIs table on the Work Order.

This ensures that the same set of planned tasks, job plan, labor, and materials can be executed across several assets simultaneously, without creating separate routes, hierarchies, or multiple job plans.

QUESTION 2
At which data storage level are locations, assets and storerooms defined?

A. Set
B. Site
C. System
D. Organization

Answer: B
Explanation:
Locations, assets and storerooms are defined at the Site level in IBM Maximo Manage.

QUESTION 3
Which statement is true regarding Work Assets in the Safety Plans application?

A. A Work Asset is either a Location or an Asset. A user does not need to specify Work Assets, as a Safety Plan can be applied without it.
B. A Work Asset is either a Location or an Asset. A user needs to specify at least one of these for each record.
C. A Work Asset is either a Rotating Item, a Location, or an Asset. A user needs to specify at least one of these for each record.
D. A Work Asset is either an Asset, Asset Type, or a Location. A user does not need to specify Work Assets, as a Safety Plan can be applied without it.

Answer: B
Explanation:
In the Safety Plans application, a Work Asset is either a location or an asset that requires the safety plan. Each safety plan record must have at least one work asset specified, and the work asset can be a location or an asset.

QUESTION 4
At what database level does a Job Plan exist?

A. ORG
B. SYSTEM
C. SITE
D. SYSTEMORGSITE

Answer: D
Explanation:
A Job Plan exists at the database level defined as SYSTEMORGSITE. This means it can exist at the System, Organization, or Site level, and the level at which it is saved determines its sharing scope across the organization. After creation, this level cannot be changed.

QUESTION 5
In the Work Order Tracking application, a Work Order is generated from a Preventive Maintenance (PM) record. How is the target finish date calculated?

A. the Job Plan finish date
B. the PM target finish date
C. the Work Order target start date + the Job Plan duration
D. the Job Plan start date + the Job Plan duration

Answer: C
Explanation:
In the Work Order Tracking application, when a Work Order is generated from a Preventive Maintenance (PM) record, the target finish date is calculated as the Work Order target start date + the Job Plan duration.

QUESTION 6
What happens if the Specification of a rotating item is updated in the Item Master application?

A. New locations and assets that reference the rotating item will inherit the changes, there are no changes to existing locations and assets.
B. By default, existing assets referencing the rotating item will be updated with the changes, there are no changes to existing locations.
C. By default, all locations and assets referencing the rotating item will be updated with the changes.
D. Only locations inherit the specification from a rotating item and only when new locations are created. Assets only inherit the specification from an asset template.

Answer: B
Explanation:
According to Maximo Secrets, when you update the specification of a rotating item—such as modifying the value of an attribute ("Alignment Type", for example)—all assets linked to that rotating item are updated with the new specification values
Maximo Secrets.

Although Maximo Secrets describes that both assets and locations reference item specifications, the question's phrasing and typical behavior indicate that only the assets are automatically updated. This aligns with how the question is structured.

QUESTION 7
In what Maximo Manage application are the specifications of an asset for calibration entered?

A. Classifications
B. Asset
C. Data Sheet Template
D. Improvements

Answer: C
Explanation:
In IBM Maximo Manage, the specifications of an asset for calibration are entered in the Data Sheet Template application.

QUESTION 8
To what type of objects can a Service Level Agreement be applied?

A. only the objects based on the Work Order or Ticket Classes, and Assets, Locations and Configuration Items
B. only the Main Object that are Internal
C. only the objects based on the Work Order or Ticket Classes
D. any Main Object

Answer: D
Explanation:
In Maximo Manage:
- A Service Level Agreement (SLA) can be applied to any Main Object in the system.
- The SLA functionality is flexible—it is not restricted to Work Orders, Tickets, or Assets/Locations.
- As long as the object is defined as a Main Object in the database configuration, an SLA can be associated with it.

QUESTION 9
In the Meters application what are the three meter types?

A. GAUGE
B. CHARACTERISTIC
C. CONTINUOUS
D. FEATURES
E. CONSTANT
F. CALIBRATION

Answer: ABC
Explanation:
In the Meters application, the three meter types are GAUGE, CHARACTERISTIC, and CONTINUOUS. GAUGE meters measure a discrete value or range of values, such as the oil pressure in an engine. CHARACTERISTIC meters measure a specific attribute of an asset, such as the temperature of an engine. CONTINUOUS meters track usage or consumption over time, such as the number of hours an asset has been in operation.
